

ALCOTEXTM METHYL ACETATE-METHANOL MIXTURE

Methyl Acetate-Methanol is a good solvent for paint and spirit based coatings.

It can also be used as a precursor for other chemical processes such as acetate production or for conversion to acetic acid whilst recovering methanol.

Property	Typical Value	Unit	Method ¹
Acetaldehyde Content	<0.10	% w/w	
Appearance	Colourless liquid		
Methanol Content	16-24	% w/w	
Methyl Acetate Content	76-84	% w/w	
Specific Gravity @ 20°C	> 0.895		
Water content (Karl Fischer)	0.20 max.	% w/w	
Hemiacetal (1-methoxyethanol)	<0.30	% w/w	

¹ internal method based upon the specified norm

Application Advice

Please ensure all transfer systems are cleaned prior to storage/use. For further information, please contact the Performance Polymers Technical Service Team at info@synthomer.com
