

Resipur 9175 is an orthophthalic unsaturated polyester resin of medium reactivity, pre-accelerated and thixotropic.

Resipur 9175 is an opaque blue liquid, free of impurities.

Resipur 9175 contains a peroxide indicator.

Application Advice

APPLICATIONS

Rigid laminates produced by hand lay-up or spray-up.

PROCESSING

Resipur 9175 may be cured at room temperature by means of the addition of an initiator (e.g. methyl ethyl ketone peroxide - MEKP).

In order to improve the surface curing, a solution of paraffin in styrene may be added.

To obtain the ideal curing, it is recommended that the molded piece should not be used until 7 days after manufacture.

The lamination of consecutive layers with more than 24 hours of interval is not recommended.

The application viscosity may be adjusted through the addition of styrene. The specification data in this technical data sheet is for the unmodified product without addition of styrene.

Shipping and Storage

STORAGE

Resipur 9175 should be stored in the original and unopened containers and in the absence of light for no longer than 3 months at a temperature below 25°C. Higher temperatures may significantly decrease storage stability.

Product Safety

Before handling, please read the Safety Data Sheet of this product for advice on safety, use and disposal.
