

Responsible Care Guiding Principles – Member Charter

Committing to the Responsible Care Guiding Principles is a condition of CIA membership, which we actively promote and manage.

Michael Willome

on behalf of Synthomer plc

Through good practice sharing in health, safety, security and the environment, alongside our commitment to Responsible Care, we strive to protect people and the environment, enhance sector performance and ensure sustainable, ethical growth for UK chemical businesses.

As a Responsible Care organisation and member of the Chemical Industries Association, we commit to:

Proactive Leadership

Enabling a culture of leadership that proactively engages in safe chemicals management practices and commits to continuous improvement, by implementing effective policies to deliver this and through open, honest measurement and reporting on safety, health, security and environmental performance.

Protecting People and the Environment

Ensuring our people are healthy, our site(s) are safe and secure and our impact on the environment is managed, through meeting our statutory obligations, adhering to good process safety management principles and measuring and continuously improving our health, safety and environmental performance.

Operating Sustainably

Ensuring resource efficiency and minimising waste through innovation, with a focus on developing new products and technologies to address environmental, social and economic factors.

Safe Chemicals Management

Managing the safety of our products across the entire supply chain, through effective stakeholder engagement in risk management, product stewardship and effective management of change practices to support innovation and new, safer and more sustainable technologies.

Engaging with Employees and other Stakeholders

Promoting safe chemicals management through effective communication with and seeking input from employees and stakeholders, including regulators, government and local communities, open and honest reporting on performance and sharing of knowledge and good practice.
